

Password Construction Guidelines

Last Update: *February 2022*

1. Overview

Passwords are a critical component of information security. Passwords serve to protect user accounts; however, a poorly constructed password may result in the compromise of individual systems, data, or network. This guideline provides best practices for creating secure passwords.

2. Purpose

The purpose of this guideline is to provide best practices for the creation of strong passwords within the GP HERO network system. This policy is to secure and protect GP HERO, our GP Clients and their customers. GP HERO provides computer devices, networks, and other electronic information systems to provide the infrastructure for our heroes to serve our GP Customers in Australia. It is vital that GP HERO and our staff manage them responsibly to maintain the confidentiality, integrity, and availability of all information assets both owned by GP HERO and those of our GP Clients and Customers.

3. Scope

This guideline applies to employees, contractors, consultants, temporary and other workers, including all personnel affiliated with third parties. This guideline applies to all passwords including but not limited to user-level accounts, system-level accounts, web accounts, e-mail accounts, screen saver protection, voicemail, and local router logins.

4. Statement of Guidelines

Strong passwords are long, the more characters you have the stronger the password. We recommend a minimum of 14 characters in your password. In addition, we highly encourage the use of passphrases, passwords made up of multiple words. Examples include "It's time for vacation" or "block-curious-sunny-leaves". Passphrases are both easy to remember and type, yet meet the strength requirements. Poor, or weak, passwords have the following characteristics:

- Contain eight characters or less.
- Contain personal information such as birthdates, addresses, phone numbers, or names of family members, pets, friends, and fantasy characters.

- Contain number patterns such as aaabbb, qwerty, zyxwvuts, or 123321.
- Are some version of "Welcome123" "Password123" "Changeme123"

In addition, every work account should have a different, unique password. To enable users to maintain multiple passwords, we highly encourage the use of 'password manager' software that is authorized and provided by the organization. Whenever possible, also enable the use of multi-factor authentication.

5. Policy Compliance

- 5.1.1 Compliance** **Measurement**
- The Infosec team will verify compliance to this policy through various methods, including but not limited to, periodic walk-thrus, video monitoring, business tool reports, internal and external audits, and feedback to the policy owner.
- 5.1.2 Exceptions**
- Any exception to the policy must be approved by the Infosec team in advance.
- 5.1.3 Non-Compliance**
- An employee found to have violated this policy may be subject to disciplinary action, up to and including termination of employment.
